Testimonial Bank of Tokyo Mitsubishi - UFJ (Holland)

Bank of Tokyo-Mitsubishi UFJ (Holland) NV (BTMU) has been established in Amsterdam for over 33 years and is recognised as a solid commercial bank incorporated under Dutch banking laws, part of a prominent banking group of high international reputation and standing. The goal of BTMU Holland is to be among the top performing foreign-owned banks operating in the Netherlands and to match the high standards of leading Dutch and European banks by providing value-added banking services and excellent operations.

Testimonial

BTMU recognises Amsterdam as having a favourable business environment, providing an excellent home for (foreign-owned) financing and holding companies and especially for pan-European headquarters of sales and distribution enterprises.

“Amsterdam offers a combination of high quality available office space, attractive tax regulations, excellent connectivity and a stable and transparent regulatory environment. We very much appreciate the hospitality, transparency and consideration of the Dutch government in their attitude towards foreign investors. With its tax regulations, for example, the Netherlands is always one step ahead”, says Masao Hasegawa, President of BTMU Holland.

Furthermore, working with the Dutch Central Bank has yielded great benefits for business. Mr Hasegawa explains: “By following a distinctly principle-based and transparent supervision system, the Dutch Central Bank has created a stable and self-disciplined regulatory environment, without time and cost-intensive procedures”. Another asset of the Amsterdam Area according to Mr Hasegawa is the quality of life and of the work-life balance it offers to locals and expats alike. “As opposed to other big cities I have lived in such as London and New York, the Amsterdam Area offers a comfortable and relaxing, almost rural atmosphere in combination with urban life in a metropolis like Amsterdam. Also, the concentration of a large Japanese community in the greater Amsterdam Area contributes to a favourable living environment”, Mr Hasegawa concludes.
